

# FlexTop 2221 Universal Transmitter

4...20 mA transmitter with HART® communication.

RTD, T/C, mV and R inputs

Isolation voltage 3.75 kV<sub>ac</sub>

Configuration via FlexProgrammer  
or HART® configurator

Accuracy < 0.1°C (Pt100)

Configurable linearisation,  
damping and status indication

Current-trim and sensor-trim

Local, remote or fixed compensation  
for "cold junction" (CJC)

Ex approvals:

Ex ia IIC T5/T6, ATEX II 1G

Ex nA II T5, ATEX II 3G

## Description

FlexTop 2221 is a 4...20 mA loop-powered, configurable universal transmitter with galvanic isolation between input and output. The input can be configured for RTD or T/C sensors, resistance, current or voltage signals.

Either 2-, 3- or 4-wire connection can be selected for the resistance input. The built-in temperature sensor or a remote Pt100 sensor can be used to compensate for "cold junction" (CJC) if thermocouples are connected.

The HART® communication feature on-line process calibration and adjustment, transmitter configuration and multiple process control in 2-wire networks.

The configuration can be established from a standard HART® configurator or the dedicated FlexProgrammer configuring tool connected to a PC.

FlexTop 2221 is embedded in silicone which makes it resistant to humid environments.

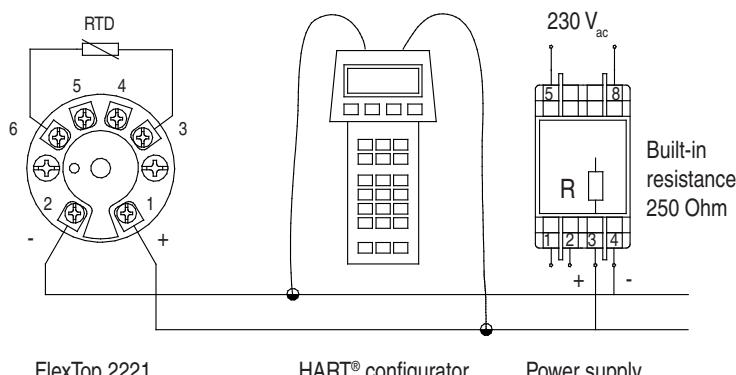

FlexTop 2221 has a 6 mm center hole for fast sensor replacement and spring loaded mounting screws which ensure a safe fastening even in vibrating environments.

## Electrical Installation

The FlexProgrammer 9701 is a dedicated tool to configure all Baumer configurable products.

### Type No. 9701-0001 comprises:

- FlexProgrammer interface unit
- CD with the FlexProgram software and product drivers (DTM)
- USB cable
- Cable with 2 alligator clips
